"Farnesylation of YDJIp is required for function at elevated growth temperatures in Saccharomyces cerevisiae.";

J. Biol. Chem. 267:18890-18895(1992).

-i- FUNCTION: PROBABLY INVOLVED IN MITCOHONDRIAL PROTEIN IMPORT. IS ALSO REQUIRED FOR EFFICIENT TRANSLOCATION OF PRE-PRO-ALPHA-FACTOR.

-i- SUBCELLULAR LOCATION: CONCENTRATED IN A PERINUCLEAR RING AS WELL AS IN THE CYTOPLASM (ACCORDING TO REF. 2).

-i- INDUCTION: MAS5 IS A HEAT SHOCK GENE WHOSE EXPRESSION INCREASES MODERATELY AT ELEVATED TEMPERATURES.

-i- SIMILARITY: CONTAINS A DNAJ-LIKE DOMAIN AND THE FOUR CXXCCGXG MOTHERS FOUND IN DNAJ PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bergez P., Doignon F.,

"The dnak operon of Bacillus subtilis is heptacistronic.";
J. Bacteriol. 179:1153-1164(1997).
-i- FUNCTION: INTERACTS WITH DNAK, TO DISASSEMBLE A PROTEIN COMPLEX AT THE PHAGE LAMBDA ORIGIN OF REPLICATION. STIMULATES, JOINTLY WITH GRPE, THE ATPASE ACTIVITY OF DNAK (BY SIMILARITY).
-i- INDUCTION: BY HEAT SHOCK.
-i- SIMILARITY: TO OTHER PROKARYOTIC DNAJ, AND TO EUKARYOTIC DNAJ-LIKE PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chaperone;

Arch. Biochem. Biophys, 305:30-37(1993).

-I FUNCTION: HAVE A CONTINUOUS ROLE IN PLANT DEVELOPMENT IN THE STRUCTURAL ORGANIZATION OF COMPARTMENTS.

-I TISSUE SPECIFICITY: EXPRESSED IN SEEDLINGS IN ALL TISS EXCEEDINGLY HIGH LEVELS IN HYPOCOTYLEDONS AND ROOTS.
-I INDUCTION: WEAK, BY HEAT SHOCK.

-I SIMILARITY: CONTAINS A DNAJ-LIKE DOMAIN AND THE FOUR C MOTIFS FOUND IN DNAJ PROTEINS.
